Project update

The Goulburn Solar Farm feasibility study is progressing, with CE4G representatives attending recent meetings to discuss the establishment of governance structures and to consider financing/share structure models.

Proposed Goulburn Community Solar Farm site

The proposed site for the Goulburn Community Solar Farm is off Bridge Street, North Goulburn. This is the preferred site and outcomes of the feasibility study will help determine if the project can proceed to the next stage at this location.

Some clearing and preliminary survey works have been carried out to assist with the assessment of the preferred location.

Survey pegs on the site

Tesla charging station

Locals may not be aware, but it is largely due to the intervention of CE4G's Peter Fraser and Alex Ferrara, acting on behalf of the Goulburn Group, that Goulburn was chosen as the location for the Tesla electric car charging station, located adjacent to the Visitor Information Centre.

Peter Fraser at the Tesla charging station.

The station was initially to be built further north along the Hume Highway, but thanks to Peter and Alex, Tesla was convinced to locate the station in Goulburn. Electric car drivers are now taking advantage of a detour through Goulburn to recharge their vehicles.

Upcoming events

The next event where you can find out more about CE4G and the proposed Goulburn Community Solar Farm is the [Goulburn Connects Sustainability Festival](#) on Sunday 15 November at Veolia Arena. We look forward to seeing you at this event.

CE4G has hosted stalls at both the Lilac Country and Parkview Markets, and feedback has been overwhelmingly positive with most people keen to see the project up and running.
